DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-89, drawn to methods of preparing compositions of polymerization-stabilized monomers, classified in class 252, subclass 183.12.
- II. Claims 90-121, drawn to mixtures of polymerization inhibitors, classified in class 252, subclass 397+. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the products (mixtures) appear to be useful in other materially different processes such as: initiators of free radical reactions; collectors or free radicals; inhibiting oxidation; light stabilizers in solid synthetic polymers.

Claims 1-121 are generic to a plurality of disclosed patentably distinct species comprising (1) the compounds identified in the specification as having structural formulae I through VII and (2) the combination of that specie and the compounds

identified as "(B)" in claims 44 and 90. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, or a single disclosed species of each of the combination if appropriate, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions indicated as I and II are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

In the case of the election of species, the multiplicity of species is such that a unduly extensive and burdensome is necessary to treat the claims as presented.

Conclusion

A telephone call was made to Daniel Reitenbach at 1-203-573-4385 by Primary Examiner Matthew A. Thexton on 8 November 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
